Monterrey, Mexico

Professional Summary

Senior Backend Engineer with 14+ years of experience designing and building scalable software systems, cloud-native services, APIs, and distributed architectures.

My core expertise is C#/.NET, backend architecture, microservices, REST APIs, SQL Server, PostgreSQL, MongoDB, and cloud platforms including Azure and AWS. More recently, I've expanded into Go, Python, React, and AI-assisted engineering while working on SaaS platforms.

I enjoy working on complex backend problems: modernizing legacy systems, designing event-driven architectures, improving reliability and observability, and building services that can scale.

Core areas:

- Backend Engineering: C#, .NET, Cold Fusion, Go, Python, REST APIs, Microservices
- Distributed Systems: Event-driven architecture, Kafka, messaging, scalability, Redis
- Cloud: Azure, AWS, Docker, Kubernetes, CI/CD
- Data: SQL Server, PostgreSQL, MongoDB, Cosmos DB, Redis, OpenSearch
- Engineering: System modernization, API architecture, observability, performance
- AI-Native Development: Cursor, Claude, GitHub Copilot, CodeRabbit, AI-assisted architecture and development

I've worked with distributed teams across the US, Canada, UK, and Latin America, building software for SaaS, fintech, real estate, logistics, enterprise, and other technology-driven products.

Work Experience

EarnIn — Senior Software Engineer

May 2026 – Present | Mexico | California USA (Remote)

- **Full-Stack & Backend SaaS Development:** Designed and developed scalable backend services in Go and Python for a SaaS Expense Management platform within a new Payroll product. Built and maintained React/Node.js components supporting backend-driven SaaS workflows.
- **System Modernization:** Modernized legacy C#/.NET Payroll services by migrating functionality toward cloud-native microservices on AWS using Docker and OpenAPI.

- **AI-Assisted Engineering:** Utilized AI-native tools (**Cursor, Claude, GitHub Copilot**) to accelerate backend logic creation, technical documentation (PRDs), and database schema modeling (ERDs).
- **Code Quality & CI/CD:** Built automated **GitHub Actions** CI/CD pipelines and integrated automated code review tools (**CodeRabbit, SonarQube Cloud**) to enforce code quality and security standards.
- **DevOps & Mobile Support:** Supported development workflows across macOS and mobile platforms through Bash/Zsh automation and targeted iOS/Android UI updates .

Technologies: Go, Python, C#, .NET, AWS, Docker, React, Node.js, OpenAPI, GitHub Actions, Cursor, Claude, GitHub Copilot, CodeRabbit, SonarQube

TeamStation AI (Contractor) — Senior Software Engineer

November 2025 – June 2026 | Client: Attom Data | California USA (Remote)

- **Platform Engineering:** Developed a high-performance web application designed to manage, search, and compare property data across the US real estate market.
- **Database & Search Optimization:** Implemented **OpenSearch** infrastructure alongside relational **SQL Server** databases to support multi-faceted search queries with low latency.
- **Full-Stack Services:** Built RESTful backend APIs and responsive user interfaces using **ASP.NET Core, C#, TypeScript, Bootstrap**, and **SQL Server**.
- **Cloud Infrastructure & Monitoring:** Deployed cloud services on **Azure** using **Azure DevOps CI/CD pipelines** and integrated **Kibana** and **Datadog** for operational monitoring.

Technologies: ASP.NET Core, .NET Core, C#, TypeScript, OpenSearch, SQL Server, Azure, Azure Pipelines, AWS, Kibana, Datadog.

Charger Logistics — Senior Software Engineer

June 2023 – September 2025 | Monterrey, Mexico (Remote) | Brampton, Ontario, Canada (Remote)

- **Event-Driven Microservices:** Designed and developed highly scalable, event-driven microservices using **C# / .NET Core** and **Confluent Kafka**, leveraging **Microsoft Azure** for cloud deployment.
- **Database & Legacy Modernization:** Led technical modernization efforts, including migrating legacy ASP.NET MVC applications to .NET Core REST APIs, and transitioning persistence layers from **SQL Server** to **MongoDB** and **PostgreSQL**.
- **API Architecture:** Managed and executed critical third-party integrations by architecting robust RESTful APIs to facilitate secure data exchange with multiple vendor systems.
- **Observability & Deployment:** Improved observability and production reliability using Kibana and Datadog across Docker and Kubernetes environments .

Technologies: .NET Core, C#, Confluent Kafka, SQL Server, MongoDB, PostgreSQL, Azure, Docker, Kubernetes, Kibana, DataDog, Redis.

Definity First — Software Engineer

October 2021 – June 2023 | Monterrey, Mexico (Remote) | Client: Insellerate (Newport Beach, California, USA)

- **Backend & Database Architecture:** Developed scalable backend infrastructure using **C#** and **.NET Framework**, managing **SQL Server** database operations via **LINQ** and **Entity Framework**.
- **Frontend Engineering:** Built responsive front-end views using **AngularJS**, **Kendo UI**, and **Bootstrap**.
- **Enterprise Integrations:** Integrated **Azure Active Directory** for authentication/SSO and real-time **Power BI Reports**.
- **Asynchronous Messaging:** Implemented a publish/subscribe application architecture utilizing **NServiceBus** to handle asynchronous messaging and improve system resilience.

Technologies: C#, .NET Framework, .NET Web API, SQL Server, Entity Framework, LINQ, AngularJS, Kendo UI, Bootstrap, Azure, NServiceBus, Swagger.

Nice inContact — Software Engineer

September 2020 – September 2021 | Sandy, Utah, USA

- **Database Optimization:** Optimized data persistence and business logic by developing and maintaining complex **PL/SQL Stored Procedures**, Views, and Functions in **SQL Server**.
- **Core ACD Module Development:** Worked on core contact center applications based on **.NET**, **C#**, and **ASP.NET**, integrating modular **Angular** components for frontend navigation.

Technologies: C#, ASP.NET, .NET Framework 4.8, SQL Server, PL/SQL, Angular, AngularJS, Node.js, JavaScript, Git, TFS.

Marshmallow Laser Feast — Software Engineer (Contract)

April 2021 – July 2021 | Remote (London, UK)

- **Low-Latency Communication:** Engineered real-time communication APIs leveraging **NetMQ** and **WebSockets** for low-latency applications.
- **Polyglot Microservices:** Developed backend services using **.NET Core** console apps, **.NET Standard** libraries, and **Node.js**, setting up CI/CD with **Docker** and **Jenkins**.

Technologies: .NET Core, C#, Node.js, WebSockets, NetMQ, Docker, Jenkins, Bitbucket, Git.

The VOID VR — Software Engineer

May 2019 – September 2020 | Lindon, Utah, USA

- **Backend Refactoring:** Refactored and upgraded legacy web applications to **.NET Core MVC** and implemented real-time communication services via **SignalR Web APIs**.
- **Frontend & DevOps:** Built responsive frontends using **Angular / TypeScript** and containerized services with **Docker** and **Kubernetes** using **Azure DevOps** CI/CD pipelines.

Technologies: .NET Core, C#, ASP.NET Core Web API, SignalR, Angular, TypeScript, Docker, Kubernetes, Azure DevOps, Octopus Deploy.

Epicor Software — Software Engineer

November 2018 – May 2019 | Monterrey, Mexico

- **Cloud Microservices & NoSQL:** Architected microservices using **Azure Service Fabric** and **.NET Core**, optimizing NoSQL data structures in **Azure Cosmos DB** for high-throughput ERP transactions.
- **Legacy Refactoring:** Migrated legacy Windows Forms workflows into decoupled **.NET Core Web API** services.

Technologies: .NET Core, ASP.NET Core Web API, Azure Service Fabric, Azure Cosmos DB, Angular, TypeScript, SignalR, Azure DevOps.

Genomi-k — Software Engineer

September 2014 – November 2018 | Monterrey, Mexico

- **Database Engineering:** Designed and modeled normalized relational databases in **SQL Server**, building complex stored procedures for processing medical data.
- **Cloud & Migration:** Spearheaded the migration of legacy web systems to **Node.js**, **Angular**, and **AWS Lambda** serverless functions.

Technologies: SQL Server, Node.js, Angular, AWS (Lambda, S3), ColdFusion, JavaScript, jQuery, HTML, CSS.

Clariti WRP Mexico — Software Engineer

November 2013 – September 2014 | Culiacan, Mexico

- **Web APIs & Databases:** Modeled **SQL Server** databases and created custom **C# / .NET Web API** services for municipal ERP platforms, backed by **WPF** and **Kendo UI** frontends.

Technologies: C#, ASP.NET Web API, WPF, SQL Server, Android, Java, JavaScript, Kendo UI, Bootstrap.

UPC Technologies & Red Rabbit — Software Engineer

March 2011 – November 2013 | Culiacan & Mazatlan, Mexico

- **Database & ERP Development:** Developed web ERP applications using **C# / ASP.NET** and electronic billing engines across **Delphi / SQL Server** and **PHP / MySQL** systems.

Technologies: C#, ASP.NET, SQL Server, MySQL, PHP, Delphi, JavaScript, Ext JS, Objective-C, Java.

Technical Skills

Category	Core Technologies
Backend & Core Expertise	C#, .NET Core, ASP.NET Core, .NET Framework, Entity Framework Core, LINQ, REST APIs, Microservices, OpenAPI/Swagger
Databases & Data Engineering	SQL Server (PL/SQL, Stored Procedures, Tuning), PostgreSQL, MongoDB, Azure Cosmos DB, MySQL, OpenSearch, Redis
AI-Native Engineering Tools	Cursor, Claude, GitHub Copilot, CodeRabbit, SonarQube Cloud, Prompt Engineering for Schema (ERD) & PRD Generation
Frontend Development	React, Angular, Node.js, TypeScript, JavaScript, AngularJS, Bootstrap, HTML5, CSS/SASS
Cloud & DevOps	Azure (DevOps, Service Fabric, App Services), AWS (Lambda, S3, EC2), Docker, Kubernetes, GitHub Actions, Kafka, Jenkins

Education & Languages

- **B.S. in Computer Science** — Universidad Politécnica de Sinaloa (GPA: 90/100, Professional License Issued)
- **Languages:** English (Fluent), Spanish (Native)
